

本機特性：

"LP" 連桿式精密直軸沖床，具有高速行進接近加工物件，低速、近等速加工後快速回復之行程循環特性功能，行程中滑塊到加工區域時速減慢，對加工物件與模具撞擊摩擦所產生的振動、噪音及模具發熱，均比一般曲柄沖床低，大可提高模具壽命、降低振動、噪音，改善作業環境等；使用引申加工時，由於有效作業區域比曲柄軸沖床更為廣泛，可幫縮減沖壓道數，例一般直軸沖床，對深引申加工時，需二至三道加工程序對較具剛性加工材料亦同，機械本身結構並不因上述行程速度快慢變化，而降低其生產效率。

Characteristics of Link Press

"LP" link press is available yo first move the slide toward the workpiece at high speed, and then get the work done at low speed before quickly retrieving the slide. As the slide slows down upon moving to the working zone during the stroke, the vibration, noise, and heat generated from the friction between the workpiece and did and much less, when compared with those crank presses. Consequently, die service life is prolonged and operating environment is improved as well. Further, upon drawing, the effective working area is wider than that of crank press, thus reducing the pressing processes. For example, conventional cross-shaft press requires 2-3 processes to complete the deep drawing, while the "LP" only needs 1-2 processes, even incase of rigid workpieces. Produciton rates are not adversely affected by the aforesaid change is stroking rates. Follwoing are a summary of characteristics for "LP" link press:
